Professional Summary

Senior QA Engineer with 7+ years of experience in software development and quality engineering, including 5+ years in QA and test automation across web and mobile products, APIs, and distributed systems.

Specialized in risk-based test strategy, automation architecture, API and integration testing, CI/CD, and observability. Combines Java, Python, and TypeScript to evolve frameworks and pipelines, mentor QAs, and improve release confidence across the SDLC.

Professional Experience

Senior QA Engineer | CI&T

Nov 2026 - Present | Jundiaí, São Paulo, Brazil | Remote

- Work as a Senior QA Engineer on digital solutions for automotive retail, within an ecosystem of SaaS platforms and artificial intelligence serving dealerships and vehicle manufacturers.
- Contribute to risk-based test strategy, prioritizing critical journeys and defining functional, integration, and regression coverage according to business impact.
- Help structure and evolve test automation, focusing on reusable components, maintainability, and regression detection throughout development.
- Collaborate with engineering and product on requirements refinement and acceptance criteria, identifying risks, dependencies, and failure scenarios before implementation.
- Perform exploratory testing and investigate defects, gathering evidence to support technical diagnosis, fix prioritization, and release quality assessment.

Senior QA Engineer | Trustly

Jan 2026 - Sep 2026 | Jundiaí, São Paulo, Brazil | Remote

- Focused on Trustly Pay's Pay by Bank frontend journeys within the Consumer Experience team: bank selection and account authorization for payments, with later fund capture and authorization reuse in subsequent transactions.
- Led test strategy and validation planning for critical Pay by Bank journeys in a squad of 14 developers and 4 QAs, organizing cycles in Zephyr Scale and assessing risks for weekly releases.
- Developed and maintained 20+ E2E scenarios with Java, Selenide, and Cucumber to validate critical payment journeys during weekly sanity and regression cycles, reducing recurring manual checks before releases.
- Contributed to E2E automation architecture by structuring reusable components and organizing scenarios to simplify maintenance and expand coverage of payment journeys.
- Evolved a 12-scenario visual sanity suite with TypeScript, Playwright, BackstopJS, and Cucumber, contributing to architecture, migration, and CI/CD integration with configurable execution parameters.
- Assessed desktop and mobile accessibility with NVDA, JAWS, VoiceOver, and TalkBack against WCAG guidance.
- Applied GitHub Copilot, Claude Code, and MCP workflows to test analysis, automation development, and recurring engineering tasks.

Senior QA Engineer | AB InBev

Sep 2024 - Jan 2026 | Campinas, São Paulo, Brazil | Hybrid

- Supported quality for BEES Customer's Purchase Management mobile experience, bringing together order and invoice history, purchase status, and delivery tracking for retailers alongside BEES payment and logistics solutions.
- Planned risk-based tests for purchase history and delivery tracking, leading iOS and Android validation for biweekly releases in a team of 4 developers and 1 QA using Xcode, Android Studio, and LambdaTest.
- Structured local and integrated validation of mobile journeys using mocks, INT/UAT environments, Firebase Remote Config, and Optimizely A/B tests to verify behavior under different configurations and feature flags.
- Developed E2E automation with Python, Pytest, Selenium, and Appium to include BEES Customer mobile app journeys in automated regression testing.
- Validated payment and logistics APIs and integrations with Postman, checking service contracts and responses to identify failures affecting Purchase Management mobile journeys.

- Served as a technical reference for complex defect investigations, correlating requests and responses in Charles Proxy with evidence in New Relic to support root-cause identification.
- Validated analytics instrumentation and event data in Segment, checking that BEES Customer mobile journeys generated the expected telemetry.
- Incorporated Cursor and MCP-integrated tools into test analysis, automation, and defect investigation.

Senior QA Engineer | CI&T
Dec 2022 - Aug 2024 | São Paulo, São Paulo, Brazil | Remote

- Tested functional and visual consistency across sites on a medical device web platform providing product information and clinical resources to healthcare professionals in multiple markets.
- Defined and implemented automation architecture with Robot Framework alongside the QA Lead during the Vividus migration, structuring reusable keywords and organizational patterns to simplify suite maintenance.
- Mentored junior and mid-level QAs through code reviews and guidance on framework contributions, supporting automation maintenance and the team's technical development.
- Integrated Robot Framework, Applitools Eyes, Sauce Labs, and Jenkins to run 100+ visual tests in parallel across three viewports, checking interface consistency across screen sizes.
- Optimized regression execution through suite parallelization, removal of unnecessary waits, and Jenkins pipeline adjustments, including configurable parameters and more useful execution artifacts for result analysis; expanded coverage of critical journeys.
- Aligned test strategies and plans with biweekly releases in a full-stack team of 8 developers and 2 QAs, coordinating coverage across functions.
- Investigated incidents by correlating logs, metrics, and operational evidence in New Relic and ELK Stack to support developer diagnosis and resolution.
- Used CI&T FLOW for requirements analysis, scenario design, and defect investigation, incorporating generative AI into QA work.
- Earned CI&T's "Mission Accomplished" recognition for consistent delivery, proactive knowledge sharing, framework improvements, and support for other QAs.

Mid-Level QA Engineer | CI&T
Jan 2022 - Dec 2022 | São Paulo, São Paulo, Brazil | Remote

- Validated EDI order exchange flows between retailer systems and a B2B platform, checking data consistency, message formats, and status transitions during order intake and processing.
- Prioritized functional and non-functional tests for an 8-developer, 2-QA backend team, focusing coverage on integration risks and inconsistencies in order data.
- Created E2E scenarios with Python, Pytest, and Selenium to validate integrated order intake and processing journeys.
- Developed API and microservice tests with Postman and REST Assured, checking contracts, payloads, HTTP status codes, and error handling in order intake and processing services.
- Queried MongoDB to check test data and order document consistency between APIs and the NoSQL database during EDI flow validation.
- Integrated automated EDI test execution into Azure DevOps pipelines, incorporating order flow validation into continuous delivery; monitored application behavior with New Relic.
- Earned CI&T's "Client Satisfaction" recognition for rapid adaptation, professional communication, problem solving, and becoming a trusted member of the client team.

Software QA Engineer | e.Mix
Jul 2021 - Jan 2022 | São Paulo, São Paulo, Brazil | Remote

- Planned and executed functional and non-functional tests for FollowNet web workflows and REST APIs, covering import/export events, documents, and alerts for freight forwarders and customs brokers.
- Developed and maintained automated API tests with Postman and Newman, checking contracts, payloads, and authentication to establish repeatable regression testing of FollowNet services.
- Automated E2E scenarios with Robot Framework to verify FollowNet web workflows and complement API test coverage during regression cycles.
- Executed performance, load, and stress tests with JMeter integrated into Azure DevOps, analyzing application behavior under concurrency to identify bottlenecks and stability issues.
- Investigated and documented defects with reproduction evidence and participated in triage with developers to support diagnosis and resolution.

Software Engineer | DNGX
Mar 2019 - Jul 2021 | Santo André, São Paulo, Brazil | Hybrid

- Developed web and mobile applications with GeneXus and customized interfaces with WorkWithPlus and Smart Devices Plus, implementing functionality and user experiences according to project requirements.
- Designed data structures and developed SQL queries in solutions using SQL Server, PostgreSQL, and MySQL to support data persistence and application functionality.
- Maintained Jenkins pipelines to automate application build, test, and deployment stages, integrating validation and publishing into delivery workflows.
- Developed functional tests with GXTest and integrated their execution into Jenkins pipelines to verify application behavior during delivery.
- Participated in requirements gathering and analysis with project stakeholders, translating business needs into application functionality and data structures.

Education

Postgraduate Specialization in Cybersecurity (Lato Sensu) | Universidade Cruzeiro do Sul
Mar 2021 - Mar 2022

Technologist Degree in Systems Analysis and Development | Universidade Cruzeiro do Sul
Feb 2018 - Aug 2020

Languages

Portuguese: Native
English: C2 Proficient (EF SET English Certificate 73/100)

Skills and Competencies

QA Strategy & Leadership: Risk-based testing, test strategy, test planning, coverage analysis, prioritization, release risk assessment, release readiness, framework architecture, pipeline design, mentoring, code review, knowledge sharing
Test Automation Architecture: Maintainable automation for web, mobile, API, E2E, integration, and regression; Playwright, Selenium, Selenide, Cypress, Appium, Pytest, Robot Framework, Cucumber, JUnit, TestNG, BackstopJS, Vividus
API & Integration Quality: REST API validation, integration flows, microservices, test data management, MongoDB (NoSQL) data validation; REST Assured, Postman, Bruno, Charles Proxy
Continuous Testing, CI/CD & Observability: Automated quality gates, release workflows, pipeline optimization, feedback-cycle improvement, logs, metrics, monitoring, operational evidence; Git, GitHub Actions, Jenkins, Azure DevOps, New Relic, ELK Stack
Programming Languages: Java, Python, TypeScript, JavaScript, SQL
Testing Domains: Smoke Testing, Manual Testing, Functional Testing, Web Testing, Mobile Testing, Cross-browser Testing, API Testing, E2E Testing, Integration Testing, Regression Testing, Exploratory Testing, Acceptance Testing (UAT), Accessibility Testing (WCAG), Visual Regression Testing, Performance Testing
Test Management & Incident Analysis: Jira, Zephyr Scale, Xray, test case design, test execution, defect management, defect triage, root-cause analysis
Mobile & Product Diagnostics: Cross-platform validation, iOS, Android, Xcode, Android Studio, Firebase Remote Config, Segment, Optimizely
Accessibility & Visual Testing: WCAG compliance, assistive technologies, NVDA, JAWS, VoiceOver, TalkBack, Applitools, Sauce Labs, LambdaTest
Performance Testing: JMeter, k6
AI-Assisted Engineering: GitHub Copilot, Claude Code, Cursor, MCP workflows
